

Max2Factory

Integrated financial
and operational control
for manufacturing
companies.

abacusgroup.io

Solution Brief

Max2Factory

Max2Factory is an ERP platform designed for manufacturing companies that need to integrate accounting, management control, financial planning, and performance analytics into a single system

The platform improves financial visibility, coordination across business functions, and decision-making capabilities.

The Challenge

Many industrial companies manage accounting, planning, and management control through disconnected systems or non-integrated tools.

Typical challenges include:

- Difficulty monitoring profitability and margins
- Limited visibility into cash flow and working capital
- Complexity comparing budgets and actuals
- Limited integration between administrative systems and analytics tools

This makes it difficult to make timely decisions based on reliable data.

The Solution

Max2Factory integrates administration, management control, and financial planning within a single ERP platform.

The system collects accounting and operational data, processes it through analytical models, and generates actionable insights for management and finance teams.

Key Features

- General ledger and administrative management
- Cost accounting and management control
- Profitability analysis
- Financial planning and budgeting
- Working capital management
- Financial reporting and business intelligence

Business Impact

- Greater visibility into costs and margins
- Improved financial planning
- Integration between accounting and management control
- Decision support for management and CFOs

Case Study

Manufacturing Financial Control

A manufacturing company operating multiple plants with heterogeneous management systems struggled to consolidate financial information and effectively monitor business profitability.

The Challenge

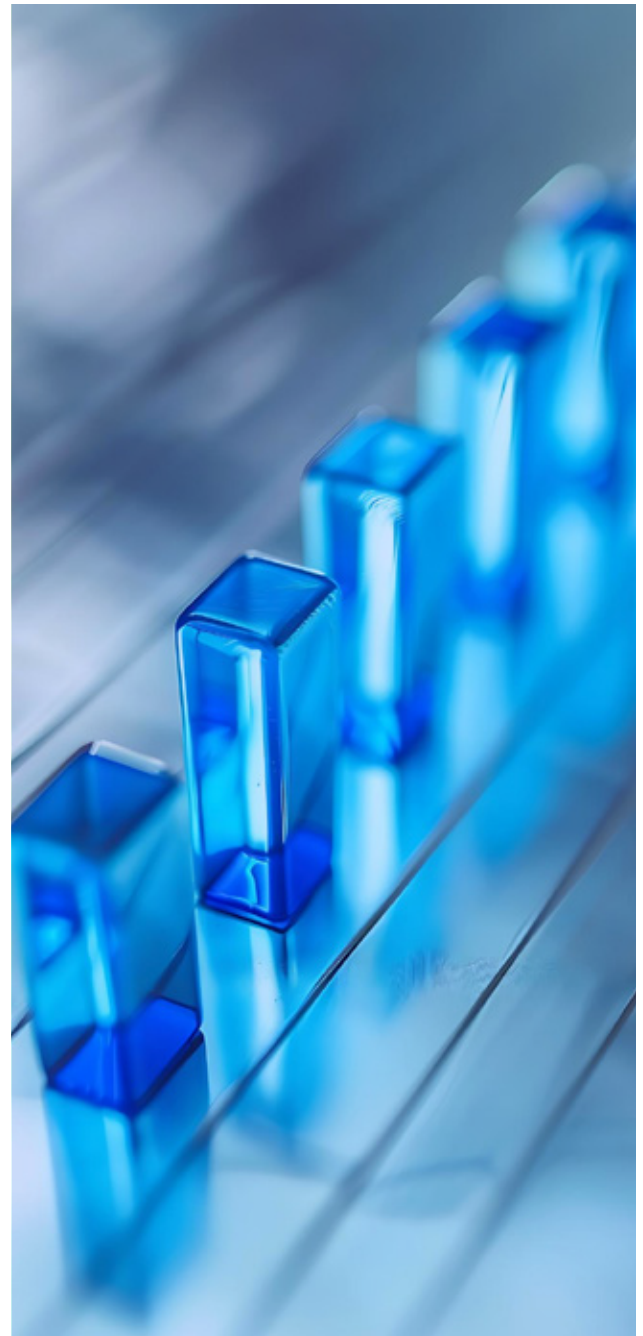

- Accounting and operational data distributed across different systems
- Difficulty comparing budgets and actuals
- Limited visibility into profitability by cost center

The Solution

The company implemented **Max2Factory** as its ERP platform to integrate accounting, management control, and financial planning. The system centralized financial data, enabling detailed analysis of costs, revenues, and cash flows.

Implementation

- Configuration of administrative modules
- Activation of cost accounting
- Deployment of reporting tools
- Training for finance and management control teams

Results

- Greater visibility into margins and costs
- Improved working capital monitoring
- Faster and more reliable financial reporting

Architecture

Platform Architecture Overview

Max2Factory uses a modular architecture designed to integrate administration, management control, and financial analytics.

Core Layers

Administration Layer

Management of general accounting, payment schedules, fixed assets, and administrative functions.

Management Control Layer

Cost accounting, profitability analysis, and management control tools.

Financial Planning Layer

Budgeting, financial planning, and cash flow simulation.

Analytics & Reporting Layer

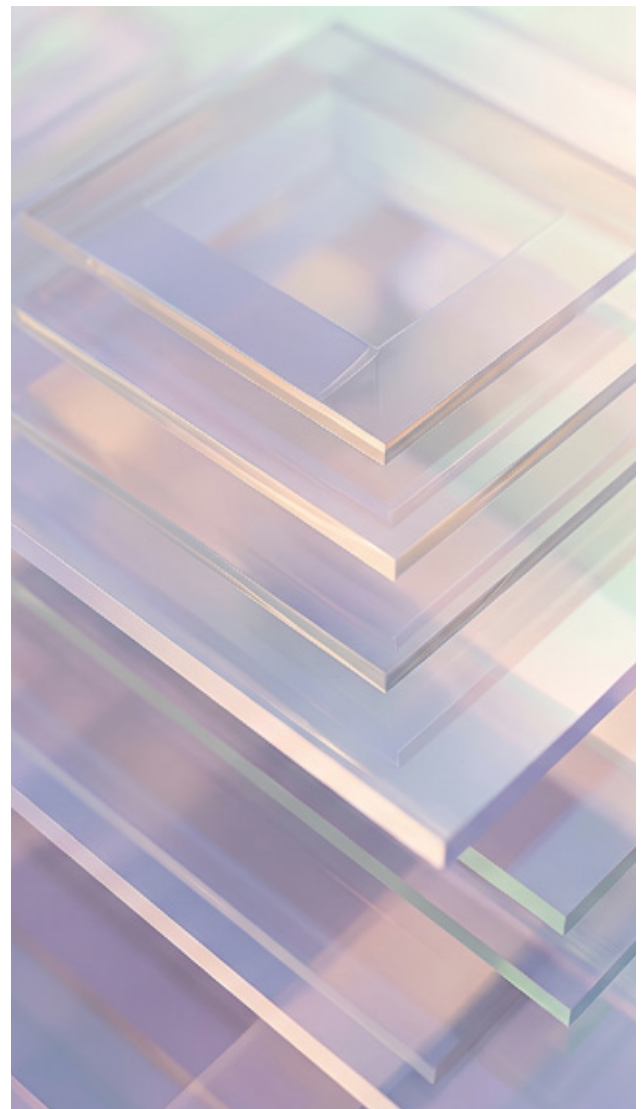

Reporting and business intelligence tools for financial analysis.

Security & Traceability

The platform includes audit trail and access control capabilities to ensure operational traceability and data reliability.

Core Components

- General ledger
- Cost accounting
- Profitability analysis
- Working capital management
- Business intelligence

Deployment

Max2Factory can be deployed in on-premises environments or integrated with enterprise cloud infrastructures.

One Abacus. Many Minds. One Vision.
